Algal Biotechnology Megatrends: International Dialogues

Moderator

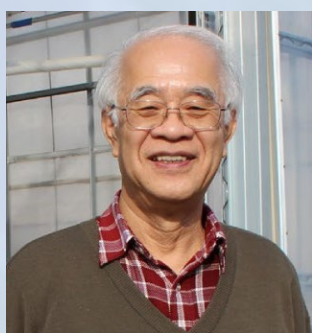

Qiang Hu

Institute for Advanced Study,
Shenzhen University, China

A global trend for greener, safer and more nutritional and sustainable food supply is creating a vast opportunity for algae to meet unmet demand. This panel, which consists of five experts from three continents, will discuss about hot R&D topics, discoveries and breakthroughs in applied phycology, share some successful stories transforming concepts into marketplace. It will also address some key challenges, barriers and opportunities in commercialization of algal products from both marketing and regulatory aspects. The necessity and importance of international collaboration both in academia and commercial sectors will be discussed. You will be encouraged to ask any questions and share your thoughts or comments with the panelists on live streaming.
